

Crush Your network and device performance Issues.

Get Total Visibility into Every Zebra Device and Network Connection.

The Juniper Mist™ AI platform works together with Zebra Wireless Insights and Juniper Wireless Services to provide performance telemetry and 100% visibility into your retail wireless networks and Zebra devices.

Maximize network performance for your Zebra retail mobile devices.

 <p>See rich telemetry data and get actionable insights on all connected Zebra devices.</p>	 <p>View connection and roaming events plus voice metrics in a convenient dashboard.</p>	 <p>Easily identify the root causes of issues and pinpoint performance degradation.</p>
 <p>Reduce troubleshooting time with smart AI-driven insights and dashboards.</p>	 <p>Use it to optimize device and network performance in stores and warehouses.</p>	 <p>Seamlessly integrate it with any third-party tool using Mist's 100% open APIs.</p>

Deliver superior experiences for your retail associates.

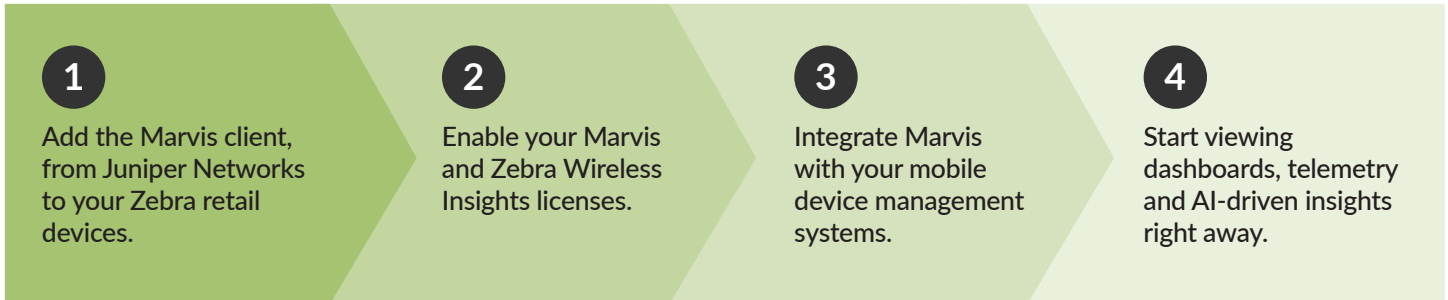

- Minimize network and device performance issues with better visibility and intelligence.
- Get insights into device, application and network health to quickly resolve disruptions.
- Keep your devices and networks running optimally for uninterrupted retail workflows.

Quickly and easily locate any missing Zebra device.

- Put an end to time-consuming searches and costly device replacements.
- Track and locate missing devices with Zebra Device Tracker integration.
- Use Virtual Bluetooth LE (vBLE) beacons to optimize your location service accuracy.

Powered by the Marvis Virtual Network Assistant

Mist AI uses the Marvis client to collect telemetry and performance data and insights from your Juniper Mist retail networks and your Zebra devices, delivering actionable, real-time insights.

Key Features

- ▶ **Client-Level Visibility**
See each device's Wi-Fi experience and understand how it sees the environment.
- ▶ **Automatic and Recommended Fixes**
Leverage Mist AI to automatically fix or get recommended actions with high efficacy.
- ▶ **Conversational Interface**
"What's wrong with the Wi-fi?" Ask a question in natural language and get specific insights.
- ▶ **Connection Events**
Get visibility into 150+ device and user states, to see what's happening and why.
- ▶ **Accurate Root Cause Analysis**
Identify causes with the highest probability of association for faster troubleshooting.
- ▶ **Roaming Events**
Track the roaming activity of every device with a 'RoamingOf' query.
- ▶ **End-to-End Assurance**
Automatically correlate WLAN, LAN, WAN, security, and client info to remediate problems.
- ▶ **Voice Events**
View call starts, stops, VoIP and Wi-Fi quality, packet loss, latency, jitter and more.

Start Simplifying Your Device and Network Management.
